

MOM, NTUC, SNEF to Form Tripartite Jobs Council To Address AI's Impact on Workers, Jobs and Business

30 April 2026

The Ministry of Manpower (MOM), National Trades Union Congress (NTUC), and Singapore National Employers Federation (SNEF) announced their intent to form the Tripartite Jobs Council (TJC). The TJC is our tripartite commitment to support workers and businesses through the artificial intelligence (AI) transition with concrete actions.

2 As AI continues to reshape industries, realign business operations and redefine job roles, the tripartite partners recognise the urgency for coordinated action. While AI presents opportunities for productivity gains and creation of new job roles, it also brings about challenges and concerns over widening skills gaps.

3 The TJC, initiated by NTUC, will support and build on the tripartite partners' respective efforts and programmes, and complement the Government's efforts under Singapore's AI agenda. The Council's objective is to ensure workers and businesses are well-positioned to benefit from AI-driven transformation, while managing it in a responsible manner. This will be achieved through a comprehensive and coordinated tripartite approach in the following key areas:

- Coordinated support for enterprise workforce transformation in tandem with AI adoption;
- Broad-based and sectoral training for workers, as well as targeted transition support for at-risk worker segments and occupations to facilitate timely transition;
- Building public awareness of AI and encouraging take-up of initiatives.

4 The TJC will enable tripartite partners to scale outreach, accelerate policy implementation and help direct resources to where they are needed most. This will ensure responsible AI adoption and strengthen AI readiness and job security for workers.

5 Minister for Manpower Dr Tan See Leng said, "The Tripartite Jobs Council represents our collective commitment to translate AI's potential into good jobs for all. By combining the reach and capabilities of our unions, employers, and the Government, we will help every worker maximise their potential, and every business can thrive in the AI-enabled economy."

6 NTUC Secretary-General (SG) Mr Ng Chee Meng said, "AI is changing the way we work, and it is critical that our workers are not left behind. The Tripartite Jobs Council will scale tripartite capabilities under one roof as we take collective action to stand with workers of all collars, especially PMEs and youths. TJC is our steadfast commitment to equip them with relevant skills, and ensure they benefit from new opportunities in the AI-enabled economy."

7 SNEF President Mr Tan Hee Teck said, "AI is developing at a tremendous pace untouched by past technological shifts and will have wide and deep impact on the economy. It is critical that we continue to strengthen business competitiveness by helping employers navigate this transformation and seize new opportunities arising from AI, while leveraging AI effectively for productivity gains. The TJC efforts will focus on making sure that sustainable growth for businesses and good jobs for workers go hand-in-hand."

8 This announcement comes in the lead-up to May Day, underscoring the Labour Movement's enduring commitment to stand with workers through change. The renewed and forward-looking pledge by the tripartite partners to safeguard livelihoods while harnessing new technologies. It reflects a shared belief that Singapore needs better workers, better businesses, and better jobs. These commitments are also reflected in the tripartite partners' May Day 2026 Messages.

9 The tripartite partners will share more details on the TJC's composition and plans in the coming months.

Increased Support for Workers and Businesses

Support for workers

10 The Government is stepping up its efforts to help Singaporeans build practical AI skills. First, SkillsFuture Singapore (SSG) will introduce a simple-to-use self-assessment tool to understand their current level of AI readiness. Second, SSG will curate high-quality courses according to workers' AI-readiness levels and highlight those with high demand. Third, the Government will provide free access for six months to premium versions of AI tools for those who take up selected SkillsFuture AI courses. This initiative aims to improve workers' fluency and use AI tools effectively in their domain. IMDA will expand the TechSkills Accelerator programme to develop AI bilingual workers, starting with the accreditation of AI-related courses.

11 NTUC also announced an expansion of its support for members to enable greater access to AI tools and courses. From 1 May 2026, NTUC members will be able to access the Assistance Programme (UTAP) benefits to access selected AI tools and resources. This list of AI tools will be reviewed regularly to ensure relevance to members' everyday work functions such as data analysis, content creation, automation, and workflow optimisation. The initiative lowers cost barriers to accessing technology and efforts to equip workers with future-ready skills and strengthen their adaptability in an evolving job landscape. More details can be found in Annex D.

12 Under the NTUC AI-Ready SG initiative, NTUC LearningHub (NTUC LHUB) also designed a comprehensive AI learning framework to support workers. Under this framework, workers can access a range of AI-related resources, including AI toolkits, AI toolkits, AI toolkits, and AI toolkits.

embark on the AI Skills Pathway that best suits their needs and level of AI readiness¹. Thereafter, they can take up corresponding AI courses, which were developed in consultation with employers, unions, industry leaders, and educational institutions. Over 4,000 workers have enrolled for AI training courses since the SG initiative in February this year.

Support for businesses

13 The Government has announced the Enterprise Workforce Transformation Package (EWTP) to provide support for companies to embark on workforce transformation. EWTP is the SkillsFuture Workforce Development Grant (Job Redesign+) (WDG(JR+)). The newly introduced grant will provide enterprises with funding support for \$150,000 per company. This will help companies to tackle key challenges in job redesign, such as reskilling, effective AI adoption, and capability building.

14 SNEF, as an appointed anchor programme partner for the EWTP, has in-house business advisors who will focus on helping employers understand AI's potential to improve productivity. For many employers, the prerequisite for AI adoption is having a good analysis and understanding of their own operational processes and then to enable these operations. Through such a journey, employers will be able to undertake the necessary job redesign, with the help of consultants if necessary, and for their workers.

15 SNEF will play the convenor role to bring together the various partners, from business advisors to job redesign consultants and training providers to provide support. It will also partner closely with NTUC to ensure that employers are matched to the appropriate programmes that meet their needs, be it the EWTP or the Company Training Scheme.
